5 **Abstract**

6 This article discusses procreation and provides scientific evidence that procreation involves not
7 only the DNA. When all the DNA was removed from an unfertilized tadpole cell and then
8 with special equipment information projected from a fully developed tadpole â???" a tadpole
9 developed. Obviously, information for the development of a fertilized cell into an embryo
10 exists. The type of field created by the special equipment was nonlinear electromagnetic field
11 (NEMF) and this is the weak (informational) field the author of this article measured for
12 almost 40 years. (The weak (informational) electromagnetic field must be nonlinear not to
13 dissipate). The idea that such informational field must exist can be traced back to Aristotle
14 and was vigorously supported by the renowned biologist Rupert Sheldrake who called it
15 ?morphogenetic field?. More scientific findings prove the presence and existence of such
16 informational field (NEMF). Based on DNA studies of the human genes, the author claims
17 that the different appearance of different races came from adaptation to the different climate
18 of different places on planet Earth.

19

20 **Index terms**— procreation; procreation and informational field; morphogenetic field; nonlinear electromagnetic field; our quantum computer.

22 **1 Introduction**

23 he renowned biologist Dr. Rupert Sheldrake, Chief of Laboratory for Biochemical Molecular Studies in
24 Cambridge, UK, postulated that there should be a "morphogenetic field" containing information about the
25 final shape of the embryo, which guides its development. He did this to explain how an egg cell develops into
26 three-dimensional structure. However, trials to measure the "morphogenetic field" failed [1] and I know why
27 they fell. I developed and patented equipment that allows me to measure this weak NEMF. The currents of
28 it are 1,000 times weaker than the biocurrents of the body. It is informational field, which rules and regulates
29 everything in the body through the information it carries, not through energy.

30 "Morphogenetic fields" exist in crystals, too, and rule the growing of the crystals. Also, the fact that once
31 the monkeys in one island learn to wash the sweet potatoes before to eat them, the monkey on adjacent islands
32 started doing it too, means that there is a wireless communication between them. Paul Davis in his book The
33 Cosmic Blueprint [1] writes: "The nature of morphogenetic fields is completely mysterious from the life measuring
34 it, I can tell you there is nothing mysterious in it -it is a nonlinear electromagnetic field (NEMF), but it is weak.

35 Being nonlinear means that this field does not dissipate with time and it can pass through obstacles (walls
36 or doors). Seeing with the mind is done through this NEMF. It allows us to see regardless the distance (in
37 space or time) or existing obstacles on the way. It is three-dimensional holographic vision [2]. If the so-called
38 "morphogenetic field" carries information about the final three-dimensional shape of the embryo and guides its
39 development, it must be able to carry three-dimensional holographic image of the embryo. Three-dimensional
40 holographic images are created with laser waves, and the waves of the weak informational NEMF are able to do
41 this.

42 The idea of existence of such field can also be found in ancient Greece in the teaching of Aristotle. Aristotle
43 believed that the development and functioning of living organisms is guided and controlled by a global plan,
44 which guides the body to a designated end. He extended this philosophy to the cosmos as a whole. "The whole

6 DR. WATSON RACIST STATEMENTS

45 Universe was created as a gigantic organism unfurling in a systematic and supervised way toward its prescribed
46 destiny.” [1] II.

47 2 Is it only the DNA?

48 Scientists found that if one of the spirals of DNA is damaged or part of it missing, it will be restored within
49 two hours through comparison with the existing whole spiral. However, recent studies [3] found that even when
50 both spirals are damaged or parts of them missing, they will be restored. There is no explanation how, but there
51 should be something carrying the whole information.

52 Also, Russian scientists found that when from an unfertilized egg the entire DNA, which carries the hereditary
53 information, was sucked out, and then with a torsion generator information introduced from an already developed
54 ted-pole -a ted-pole developed with all its parts [4]. Therefore, not the DNA, the primary factor in the procreation
55 is the information carried by the weak NEMF.

56 And this information is what restores the DNA when both spirals of DNA are damaged or missing. Who
57 carries this information? The author of this article, after measuring the human nonlinear electromagnetic field
58 (NEMF) for almost 40 years, claims that the weak

61 care@mariakuman.com view point of physics.” After I have spent 40 years of my nonlinear electromagnetic
62 field (NEMF), which rules and regulates everything in the body, carries all the information necessary for the
63 procreation.

64 4 III.

65 The Joke with DR. WATSONS Dr. Watson, who took Nobel Prize with Dr. Crick for revealing the double helix
66 structure of DNA, married an 18 years-old female student 13 years later. She was 20 years younger than him
67 and she married the genius Watson to have genius children. What a bad joke. The first son was diagnosed with
68 manic-depressive schizophrenia; the second was normal, but not genius in any way. Maybe, indeed it is not only
69 the DNA that makes procreation to happen.

70 IV.

71 5 DNA and NEMF

72 It seems that when the weak NEMF (that carries the information) enters an ovarian cell, the fertilization is
73 considered successful and the procreation can start. The material DNA is not enough for the procreation to
74 takes place. Thus, the three-dimensional future individual is synthesized under the NEMF guidance. Maybe,
75 this weak NEMF is the so-called Spirit -all religions teach that we are material body and Spirit.

76 How weak is this NEMF? As said, it is 1,000 times weaker than the biocurrents of the body. The author had
77 to develop supersensitive equipment to be able to measure it. Since this NEMF is too weak to be measured with
78 existing equipment, the scientists deny its existence. Another reason to deny its existence is -it is stored in the
79 Subconscious and we don't have conscious awareness of it.

80 The waves of this weak NEMF (called Spirit) are basis of the operating in the Subconscious Quantum
81 Computer, which from the Subconscious rules and regulates everything in the body. From hypnosis, which
82 puts the conscious to sleep and allows access to the Subconscious, we know that our Subconscious Computer
83 (when the Conscious is shut off) does calculations 10,000 times faster than our Conscious.

84 This makes the Quantum Computer of the Subconscious supercomputer because it works with waves, which are
85 much faster. These are the waves of our NEMF and they make the speed of processing of our Quantum Computer
86 10,000 times faster than the calculations done in our Conscious. Since our Conscious works on biochemical basis
87 and our digital computers work on chemical basis, this makes our Conscious Computer a Digital Computer.

88 Since the Quantum Computer operates with waves, it can connect us to the Universe, it can connect us with
89 each other (telepathic connection), and it can connect us (telepathically) with animals and plants. We are body
90 and Spirit (NEMF) and the more spiritual we are, the higher is the frequency of our NEMF [2] and easier it is
91 to get in touch and use the Quantum Computer of our Subconscious, which works with the waves of our NEMF
92 (called Spirit).

93 V.

94 6 Dr. Watson Racist Statements

95 Let us go back to Watsons. Why was such a bad joke played to Watsons? It was to show them that DNA is not
96 everything. As we showed in the article [6], we are Body and Spirit, and the Mind and intellect come with the
97 Spirit (the NEMF), not so much from the DNA.

98 Unfortunately, Dr. Watson didn't get it. Watson later made racist statement that the Africans are lower grade
99 people because their IQ tests are lower. Black people got offended and ascribed this to environment (not DNA)

100 and they were right. We are going to show in this article how the races developed based on DNA studies, only.
101 And this will prove that there is no place for racist statements.

102 VI. What DNA Studies Say about the Origin of Races?

103 Three Italian genetic specialists L. L. Cavalli-Sforza, P. Menozzi, A. Piazza were paid by UNESCO for 17 years
104 to travel all over the planet, study the human genes, and map them. They did and they publish their results in
105 the book History and Geography of the Human Genes [6].

106 Since the dark-skin Africans have the same features (dark skin and small-curls hair) as the Australian
107 aborigines, the genetists expected to find common genes in both populations regardless how far these places
108 are. However, their genetic studies [6] did not find any common genes between the Africans and the Australian
109 aborigines -none, whatsoever.

110 They publish their results without comments. However, since both populations live at the same geographic
111 latitude, obviously when adapting to its tropical hot climate, they developed the same featuresdark skin and
112 small curls hair. The Ethiopians of East Africa have the same dark skin and small curls hair as the Australians
113 and the West Africans because they live at the same hot tropical climate.

114 However, if the Ethiopian facial features are different from these of the West Africans, it is because one of the
115 Ethiopian tribes, Oromo, came from the Pacific, as Ethiopian ancient texts say. However, living at the equatorial
116 hot tropical climate for many thousands of years, when trying to adapt to it, they acquired the same dark skin
117 and small-curls hair.

118 Let us, now, take as an example the Mongoloid race. The Eskimo, who live far to the north, have the same
119 slanted eyes as the Mongoloid race. Probably, the slanted eyes were developed as adaptation to the strong
120 reflection of the sun light from the snow. With time, some of these northern tribes moved south to present day
121 Mongolia, China, Korea, Japan, but the slanted eyes stayed with them.

122 Let us, now, take as an example the white race. They lived at latitudes between the northern Eskimo and the
123 southern black race. And when adapting to their environment with less sun and cold winters, they developed
124 the features that are specific for them -white skin and narrow nostrils to decrease the flow of cold air.

125 Thus, I truly believe that there was one prototype of humans on Earth at the beginning. The different races
126 developed when adapting to the dramatically different climates of different areas and we have genetic studies to
127 prove it [2]. VII.

128 **7 Conclusion**

129 Considering the above, racial discrimination does not make any sense because we are the same people. If some
130 of us look different, it is because their ancestors lived at different geographic latitude for thousands of years and
131 adapting to these conditions they developed different appearance. ¹
