

Science for the Effect of Prayer

Maria Kuman

Received: 9 December 2018 Accepted: 3 January 2019 Published: 15 January 2019

Abstract

The Russian professor Slezin wrote: "Before our findings, the science knew three states of the Conscious: awaken state and slow and fast sleep, which differ by the character of their electric impulses. Now, we know about one more state – total switch off of the electrical activity on the brain surface during prayer while the person is totally conscious". Mahatma Gandhi warned: "Prayer is not the holiday entertainment of old ladies. When used right, it is the most powerful instrument of action".

Index terms— prayer; effects of prayer; science and prayer; measuring effects of prayer.

1 I. Introduction

In the beginning was the word and the word was with God and the word was God" (Christian Bible, John 1:1). "Word" means "Information", so Information was at the basis of all Creation. So, information imprinted by the Creator God created the whole material world. What kind of information was this? The information needed to be nonlinear not to dissipate and to be able to pass, if necessary, through screens and other obstacles [1], [2].

If so, the whole material world is "matter + Spirit" and the Spirit is this nonlinear informational field that created the whole material world [1], [2]. Since our material body is mostly water, the water should be able to imprint information, and this is the message Masaru Emoto delivers in his book: *The Secrets Messages of Water*. "The words have their individual and unique vibrational frequencies" and these vibrational frequencies can be imprinted on the structure of water [3]. This nonlinear informational field called Spirit is weak, but very important field. It is 1,000 times weaker than the biocurrents of the material body. Since our science does not have sensitive enough equipment to measure it, our science denies its existence -we are only a material body, there is no Spirit. The author of this article had to develop and patent supersensitive Author: Ph.D, Holistic Research Institute, 1414 Barcelona Dr., Knoxville, TN 37923, USA. e-mails: holisticare1@gmail.com, www.mariakuman.com equipment capable to measure this weak but very important nonlinear electromagnetic field (NEMF) [4].

Then the author of this article spent almost 40 years of her life measuring this weak NEMF, called Spirit, which rules and regulates everything in the material body from the Subconscious. The waves of this NEMF are the basis of our powerful Quantum Computer -it calculates 10,000 times faster (known from hypnosis, which put the conscious to sleep to access the subconscious) and house the whole life memory storage (also known from hypnosis). From the Subconscious, this powerful Quantum Computer rules and regulates everything in the material body, and carries our superb Mind.

If information or words were the basis of creation of the whole material world, words should be able to reach and activate our Quantum Computer working with the waves of our Spirit (the NEMF). This could explain how verbal prayer works and why it works. Russian studies [5] found that during verbal prayer our Conscious, which is our Digital Computer, is shut off (just like during hypnosis and during meditation). Obviously, this is necessary so that the Quantum Computer of our Subconscious can be accessed and activated. Hope this explains what Mahatma Gandhi said: "Prayer is the most powerful instrument in action."

2 II. Scientific Studies Revealing the Power of Prayer

Since information or words, which were vibrations, were imprinted to create the material world, IR spectra, which register vibrations, were used to make visible the effect of prayer. Russian scientists did comparative analysis of

4 III. CONCLUSION

45 the IR spectra of the blood of patients and healthy individuals before and after prayer. Fig. ?? shows the effect
46 of prayer on a healthy individual [5].

47 Fig. ??a shows the vibrational frequencies specific for the immune system of a healthy individual, who was
48 a strong believer. Fig. ??b shows the changes in the immune system of this healthy individual after prayer.
49 Obviously, the prayer mobilizes the immune system of the sick individual, by switching on internal reserves,
50 which lead to self-correction and restoration of the lost health [5].

51 The Russian scientists also found that just prayer is capable to increase the life energy of the patient up to 100
52 times. They also found that prayer always increases the vibrations of the praying person to higher frequencies,
53 which brings him closer to the Emoto found that the word "Love" makes the liquid water crystalize in very pretty
54 symmetric ice forms, while the word "hatred" makes the liquid water crystalize in ugly asymmetric ice forms
55 [3]. In the human material body, the nonlinear informational field -the informational program that created the
56 body -is located in the Subconscious. If so, we don't have conscious awareness of it, but from the Subconscious
57 it continues to rule and regulate everything in the material body.

58 3 Fig. 2

59 It was also found in Russia that when a person is under stress, first the intercellular space responds with changes
60 -its elasticity decreases and formations similar to "monetary stacks" are formed [5], which later leads to inability
61 of the cells to communicate. In a cut wound, the separated cells dedifferentiate to be able to multiply fast and
62 heal the wound fast, but in the case of cancer there is no current of regrowth to guide the cellular growth and
63 the cells start multiplying senselessly, which we call malignancy. This is how stress causes cancer [6], [7], [8].

64 The formation of these "monetary stacks" between the cells, which makes the normal communication among
65 the cells impossible and leads to malignancy explains the strange observed fact that if somebody is sick with
66 very high body temperature, he is immuned against cancer for the next five years. Probably, the very high
67 body temperature melts the "monetary stacks" in the intercellular space between the cells and normalizes their
68 communication.

69 If stress destroys the balance between the sympathetic and parasympathetic nervous systems and prayer seems
70 to be restoring their balance, this could explain how prayer helps cancerous patients to recover. Obviously, as
71 prayer rebalances the sympathetic and parasympathetic nervous systems, the "monetary stacks" disappear, the
72 intercellular communication is restored, and the cancer is cured. It may help imagining or visualizing during
73 prayer how the "monetary stacks" between the cells melt and the normal communication among the cells is
74 restored.

75 Since in the last two centuries the yearly increase of cancer has grown tremendously, early detection and
76 treatment became necessity. In Russia, a way was found to early detect cancer with measurements of the
77 frequencies of the fine field energy (NEMF) (Fig. ??) [5] or measuring the dissipation energy in the cells. Also, a
78 way was found to early treat and prevent cancer by applying to the intercellular space appropriate fine-field wave
79 information [5]. (Details were not given). Prayer also seems to increase the hemoglobin level, which increases the
80 supply of oxygen to lifeimportant organs and systems [5]. Also, analysis of the IR spectra of the blood showed
81 that after prayer the absorption peaks are much less because the peaks of bronchial inflammation and the tension
82 in the heart area were not there any more. After prayer, also disappeared the peaks related to disturbed blood
83 supply to the brain [5].

84 While before prayer the heart of a patient with heart troubles had 66 beats per min, after the prayer the beats
85 were 74 per min. Also while before prayer ECG showed disturbed metabolism in three places: the heart zone
86 behind the diaphragm, upper zone, and front-side, 7 days after the prayer, disturbed was only the metabolism
87 in the zone behind the diaphragm [5].

88 4 III. Conclusion

89 Prayer is a verbal (informational) approach to our Quantum super-computer, which works with the waves of our
90 NEMF and from the Subconscious rules and regulates everything in the body. For this reason, prayer has global
91 influence over the whole body. It influences the immune system and can change the blood content and the blood
92 circulation, the heart, the blood supply to the brain, etc.

93 Stress destroys the balance between the sympathetic and parasympathetic nervous system. It was found
94 that stress causes cancer by forming "monetary stacks" formations in the intercellular space, which make the
95 communication between the cells impossible.

96 The cells become disconnected like they are in a cut wound. They dedifferentiate to be able to multiply fast
97 and heal the wound fast, but in the case of cancer there is no wound to heal and no current of regrowth to guide
98 the cells as it would be in a cut wound, and they multiply senselessly. We call this malignancy.

99 Prayer was found to be able to rebalance the sympathetic and parasympathetic nervous systems, which
100 eliminates the "monetary stacks" between the cells and restore the normal communication between them. This
101 is how the prayer helps cancer patients.

102 The article also delivers information how to early detect cancer by measuring the dissipation energy distribution
103 by frequencies. Cancer patients were found to have frequency emission in the 0.15 -0.4 MHz region, which healthy

104 people do not have. This makes me think that probably the presence of "monetary stacks" in the intercellular
105 space is the source of these frequencies.

106 The article also reported the Russians have found ways to destroy the "monetary stacks" by applying to the
intercellular space appropriate fine-field wave information [5]. More details were not given in the Russian source.
